

Week 2 Executive Summary Report

Business Intelligence & Interactive Dashboard Development

1. Executive Summary

This report summarizes the Week 2 Business Intelligence dashboard developed for the retail business case. The dashboard combines sales, profit, product, category, segment, regional, geographic and time-based analysis. Reported KPIs are Total Sales 12.64M, Total Profit 1.47M, Average Sales 246.49, Profit Margin 11.61%, and Total Orders 25K.

2. Business Problem

Management needs an interactive view of business performance to monitor sales and profitability, identify strong and weak products, categories and regions, observe trends over time, and support informed strategic decisions.

3. Key Performance Indicators

KPI	Value
Total Sales	12.64M
Total Profit	1.47M
Average Sales	246.49
Profit Margin	11.61%
Total Orders	25K

4. Five Key Business Insights

- Overall performance: The dashboard records 12.64M in total sales and 1.47M in total profit, resulting in an overall profit margin of 11.61%.
- Category performance: Technology is the strongest category shown, generating approximately 4.74M in sales and 663.78K in profit.
- Category profitability: Technology and Office Supplies show stronger margins than Furniture. Furniture records 6.94%, compared with 13.69% for Office Supplies and 13.99% for Technology.
- Regional performance: The regional charts show Central as the strongest region for both sales and profit, while several other regions contribute lower amounts.
- Sales trend: The monthly sales line shows a clear upward movement, reaching approximately 1.4M toward the end of the displayed period.

5. Three Business Risks

- Margin pressure: The overall 11.61% profit margin needs to be protected as sales grow.
- Category profitability gap: Furniture's 6.94% margin creates a potential profitability risk if costs, pricing and discounts are not managed.
- Regional concentration: Uneven regional performance creates potential over-reliance on stronger markets.

6. Three Business Opportunities

- Scale Technology: Strong sales and profit performance creates an opportunity to increase investment in high-performing technology products.
- Improve Furniture economics: Review pricing, costs, product mix and promotions to close the margin gap.
- Build on sales momentum: The upward monthly sales trend provides an opportunity to strengthen successful sales and marketing activities.

7. Five Actionable Recommendations

1. Prioritize high-performing Technology products and categories in sales planning and marketing.
2. Review Furniture pricing, procurement costs, discounts and product mix to improve its 6.94% margin.
3. Develop targeted strategies for lower-performing regions while maintaining investment in the strongest regions.
4. Use product-level sales and profit rankings to focus inventory, promotions and sales effort on products with strong commercial potential.
5. Monitor monthly sales, profit and margin KPIs regularly so management can respond quickly to performance changes.

8. Conclusion

- The Week 2 Power BI dashboard provides management with an interactive view of sales and profitability. The analysis indicates strong Technology performance, meaningful differences in profitability across categories and regions, and an upward sales trend. These findings can guide investment, margin improvement and ongoing performance monitoring.
